

## ABILI-T EIBI PROGRAM: Early Intensive Behavioural Intervention

**MISSION** At **Abili-T**, our mission is to support young children with Autism Spectrum Disorder (ASD) and other developmental disabilities to reach their full potential by providing services based on the best practices principles of Applied Behaviour Analysis (ABA).

### OUR APPROACH

Our Early Intensive Behavioural Intervention (EIBI) program is specifically tailored to meet the individual needs of each child and family. Our goal is to help children increase and maintain prosocial behaviour, learn new skills, diminish difficult behaviour, and to maintain and generalize learning across situations and environments.

Throughout the day, we capitalize on children's individual interests and motivations. Learning should be fun, and we promote engagement by providing children with access to a variety of interesting learning activities (e.g. gross motor activities in our gym, circle time activities, singing, dancing, music, toy play, arts and crafts, story time, etc.)

Our aim is to help children to develop the skills they will need for school, by capitalizing on their strengths.

### OUR INTERDISCIPLINARY TEAM

- At Abili-T, we believe in offering support and programming of the highest caliber. Our talented and dedicated staff work as a team with parents.
- Our programs are supervised by Board Certified Behaviour Analysts (BCBA's and BCaBA's) who develop, monitor and evaluate each child's program and work closely alongside each child's 1:1 interventionist to ensure the highest quality service.
- A speech language pathologist and psychomotor professional provide ongoing consultation to the team with information concerning the child's communication skills and motor development.
- Parents know their child best, and are valued members of our team. We provide ongoing parent training to help them to better support their child using ABA-based strategies. We meet with parents regularly to ensure that their priorities are being addressed and that skills learned in our program are generalized to the home setting.
