

INDIVIDUAL NON-INTENSIVE PROGRAM

MISSION: We support children in the early stages of development in communication, joint attention, social skills, play skills, cognitive skills and imitation.

FOR WHO? Children aged 18 to 48 months, with a diagnosis or a suspicion of global developmental delay or autism spectrum disorder.

OUR TEAM: Interventionists trained in ESDM, part of an interdisciplinary team (speech therapist, psychomotor therapist, behavioural analyst), supervised by certified ESDM professionals. Our team is warm, experienced and dedicated to your little ones.

OUR SERVICE: The intervention is offered in a one-on-one session: one interventionist for one child (1:1). The schedule is flexible, for a minimum of 6 hours/week. The time slots of the sessions: 8:15 to 10:00 or 10:15 to 12:00 or 12:45 to 2:30 or 2:45 to 4:30.

PRICE: \$ 40 / hour

CLINICAL MODEL: Our team is trained in the **Early Start Denver Model (ESDM)**. Teaching according to the **ESDM** model is done within the framework of a typical playful activity: the interventionist optimizes the child's affect, encourages taking turns, dyadic engagement and communication skills with joint attention.

In ESDM sessions the interventionist effectively uses the applied behavior analysis (ABA) intervention models: high repetition of learning opportunities, ABC structure (antecedent—behaviour—consequence), reinforcement of desired behaviours, behaviour shaping, language adapted to the child's level, social response, etc.
